

Reducing Opioid Overdose Risk

 Perspectives in CareSM

by Sure Med Compliance

ProAssurance has an exclusive affiliation with Sure Med Compliance to help you develop and maintain safe prescribing practices for opioids and other scheduled medications. **As a ProAssurance insured, you have access to this complimentary program.**

To truly mitigate risk, physicians who prescribe opioids must standardize how they determine and document the rules and requirements of prescribing. This means capturing up to 26 data points per patient encounter and showing clear evidence of following published treatment protocols. Using a tech-enabled solution like the Perspectives in CareSM digital health platform can help ensure the appropriate chart documentation is always present and can save you your most valuable asset: time.

VALUE

Controlled substance therapy comes with risks—risks that can be difficult to understand in the time allotted for an office visit.

This innovative program helps mitigate those risks by collecting and summarizing key pieces of data and reporting them back to the doctor prior to each office visit. The software migrates directly into 95% of all EHRs nationwide and can be implemented in under an hour. This translates into better outcomes for you and your patients.

Mitigates physician risk by providing a date- and time-stamped legal report that completes chart documentation.

Improves patient outcomes by directly influencing safer treatment decisions.

Increases practice revenue through justifying billable CPT codes.

MISSION

Sure Med's mission is to end the overdose epidemic through greater prescribing compliance. They offer the first and only digital health platform scientifically validated to mitigate risk to both patient and provider in pain management settings.

By delivering clinical insights that help influence safer prescribing decisions, we can help protect you from liability and create safer exposures to controlled substances.

INNOVATIVE SOLUTIONS

Through the Sure Med program, we can help healthcare providers:

- Verify which patients are suitable for opioid therapy
- Identify patients with significant risk factors for opioid use disorder
- Closely monitor the effects of treatment over time
- Reduce the time needed to assess and document legitimate medical purpose
- Produce an instant date- and time-stamped report that migrates effortlessly into EMR/EHR

HOW IT WORKS

STEP 1

Patient receives a welcome letter and instructions.

STEP 2

Patient takes evaluation before each office visit.

STEP 3

Patient responses are scored, summarized, and uploaded to the EHR.

IMPROVING ACCESS TO APPROPRIATE PAIN MANAGEMENT

By partnering with companies dedicated to new technologies and innovation that benefit patients and improve lives, ProAssurance is able to reduce provider risk and ultimately protect others. It is an intersection of potential that aligns with our purpose.
